

Order Inion

2920

Premaxillaries well developed, excluding maxillaries from edge of upper jaw. Opercular apparatus sometimes incomplete. Gill openings wide. Gills 4, slit after fourth. Pharyngeal bones unmodified. Air bladder small or absent, with duct when present. Ovaries with oviducts. Skeleton mostly weakly ossified. Front vertebrae simple, unmodified, without auditory

ossicles; vertebral centra
crossified with arches.

Mesocoracoid arch usually
absent or atrophied. Shoulder
girdle with posttemporal not
normally united with skull,
though touching same at or near
nape. Scales mostly cycloid,
often absent. Photophores
usually present. Dorsal and
anal fins without true spines.
Ventrals, when present, abdominal.
Adipose fin variously present or

absent.

Marine fishes, mostly bathypelagic. Though allied with the herring and salmon like groups they differ in the absence of the mesocoracoid bone and the connection of the shoulder girdle with the skull imperfect. Following Parr's contention the Cetunculi are here omitted and ranged with the Xenoberyces.

Depth $6\frac{4}{5}$ to vent; head $2\frac{3}{5}$, width $3\frac{1}{8}$. Snout $2\frac{1}{3}$ in head; eye $9\frac{1}{4}$, $3\frac{7}{8}$ in snout, $1\frac{2}{5}$ in interorbital; maxillary reaches eye, length from snout tip $2\frac{1}{3}$ in head; interorbital 7, low.

Scales 18? enlarged to vent. On figure only 9 shown between ventral and anal. Scales nearly all lost.

D. II, 9, first branched ray $2\frac{1}{5}$ in head, origin slightly behind first third between ventral and anal origins; third branched anal

Analysis of Families

a. Myctophoidea. Mouth not or but little protractile; interopercle not reduced; clavicle attached to supracleavicle at lower end of latter.

b. No photophores.

c. Teeth in jaws in bands of several series.

d.¹ Dorsal postmedian; rays of some fins filamentous. Aulopidae.

d.² Dorsal premedian; rays of fins without filaments. Synodontidae.

e.² Teeth uniserial or in very narrow bands in jaws; some lower or palatine teeth may be fang like. Ludidae.

b.² Photophores present, rarely or only occasionally absent. Myctophidae.

Analysis of the

a.² Alepidosauroidae. Mouth not protractile; dentition strong; interopercle reduced; clavicle attached to supraclavicle at or near upper end of latter, which extends downward and backward and has upper postclavicle attached to its terminal end.

e.¹ Eyes not telescopic.

f.¹ Eye normal, without orbital cavity expanded downward.

g.¹ Dorsal moderate, postmedian; ventral opposite dorsal; size small. Amniotidae.

g.² Dorsal very large, high, occupies most of back; ventral nearer pectoral than anal; size large. Alepidosauridae.

f. ² Eye with orbital cavity
 expanded downward; ~~teeth~~ large,
~~some fang like.~~ Evermannellidae.

^{mostly}
e. ² Eyes, telescopic, lateral,
 directed upward. Scopelarchidae.

5271

ray $3\frac{4}{5}$; pectoral $2\frac{1}{5}$, rays 8;
ventral $2\frac{3}{4}$, rays 8.

Rather light colored. Deep
black of buccal and branchial
cavities shines through their
integuments. Hind part of anal
black. Length 445 mm. (Günther.)

Indian Ocean, China Sea.

2926

Family Aulopidae

Body moderately to slenderly elongate, little compressed or subcylindrical. Eyes lateral. Mouth slightly protractile, terminal, rather wide. Maxillary long, reaches hind eye edge or beyond. Vomerine teeth forms single transverse series. Branchiostegals long, curved, numerous. No air vessel. Vertebrae 52. Scales moderate or small. Sometimes rows of luminous spots or photophores along belly. Dorsal premedian or median. Anal postmedian. Pectoral rather low. Ventrals widely separated, rays 9, inserted below or little behind pectorals.

420

~~Lutjanus griseoides (Guichenot)~~

Mesoprion griseoides Guichenot, Notes Ile
Réunion, vol. 2, 1862, p. 2 (23), Réunion.
Lutjanus griseoides Sauvage, Hist Nat.
Madagascar, Poiss., 1891, p. 92, pl. 9, fig. 3,
a-b (type; Madagascar).

Although Regan has placed the Atelepoidea as a suborder of the Inioi, chiefly on certain osteological resemblances with Aulopus, especially its shoulder girdle, it does not appear to me closely related. Its peculiar physiognomy, even if only superficial, certainly recalls the jugular ventrals of the brotulids, macrurids, or such groups. Macristium, which Regan also places as probably related to Aulopus is arranged with the clupeoids near the Alepocephalidae by Jordan.

Analysis of genera

a.¹ Body moderately long; no photophores;
dorsal premedian. Aulopus.

a.² Body very slender and elongate;
3 ventral rows of photophores each
side; dorsal median. Scopelosaurus.

Genus Aulopus Cloquet

2930

Aulopus (Cuvier) Cloquet, Dict. Sci.
Nat. Paris, ed. 2, vol. 3, Suppl.,
Oct. 1816, p. 128. Type Salmo
filamentosus Bloch, monotypic. —
Cuvier, Règne Animal, ed. 1, vol. 2, 1817
(Dec. 1816), p. 170. Type Salmo
filamentosus Bloch.

Hime Starks, Copeia, no. 127, March
29, 1924, p. 30. Type Aulopus
japonicus Günther, orthotypic.

Body rather elongate, slightly compressed.
Head large. Muzzle rather short.
Eye moderate, large. Mouth cleft
wide. Maxillary extends below hind
part of eye or beyond, dilated behind
and with 2 supplemental maxillary.
Teeth small, conic, in narrow bands.

Genus Aulopus Cuvier

Aulopus Cuvier, Règne Animal, vol. 2,
1817, p. . Type Salmo filamentosus

Block, monotypic.

in jaws, on vomer, palatines, pterygoids
and tongue. Gill opening very wide.
Pseudobranchiae well developed.

Branchiostegals 10 to 16. Pyloric appendages
5 or 6. Orbitospheroids well developed
or no ossification in front of interorbital
region (Hime). Scales large. Lateral
line complete, axial. Dorsal advanced
or inserted nearly opposite ventral,
often with long pointed lobe in male.
Adipose fin small. Anal moderate.
Caudal forked. Pectoral rather
long.

Analysis of species

a. Aulopus. Gill rakers 6 to 8 + 12 to 14;
scales 50 to 52 in lateral line to caudal
base and 3 more on latter.

b. Dorsal II, 12 to 14; Anal II, 9.
filamentosus.

b.² Dorsal II, 20; Anal I, 12. purpurissatus.

a.² Hime. Gill rakers 8 to 9 + 14 to 16;
scales 42 or 43 in lateral line to
caudal base; Dorsal I, 15; Anal II, 8.
japonicus.

Depth 5 to $7\frac{4}{5}$; head 3 to $3\frac{1}{2}$,
 width $1\frac{9}{10}$ to 2. Snout $3\frac{1}{3}$ to $3\frac{2}{3}$ in
 head from snout tip; eye $3\frac{7}{8}$ to $4\frac{2}{5}$,
^{subequal with}
~~to 1~~ in snout, greater than interorbital;
 premaxillary not quite reaching opposite
 hind eye edge, length $1\frac{7}{8}$ to 2 in head
 from snout tip; interorbital 5 to 6,

slightly concave. Gill rakers 7 or 8 + 13 or 14, of which 5 above and 3 below rudiments; others firm, rather slender; gill filaments $2\frac{1}{2}$ in interorbital.

Scales 50 to 52 in lateral line to caudal base and 3 more on latter; 5 above, 5 below, 15 predorsal, 3 rows on cheek. Caudal scaly basally.

D. II, 12, I to II, 14, I, second simple ray $1\frac{3}{4}$ to $1\frac{4}{5}$ in total head length; adipose fin to ; A. II, 9, I, second simple ray $3\frac{1}{4}$ to $3\frac{2}{5}$; caudal forked; least depth of caudal peduncle 5 to $5\frac{1}{5}$; pectoral $1\frac{7}{8}$ to 2; ventral

$1\frac{1}{2}$ to $1\frac{3}{5}$.

Dull or pale brown, little paler below. Dorsal dusky terminally. Fins all pale.

Mediterranean, Canaries, Madeira. Several of specimens are males and show longer dorsal rays anteriorly, though none prolonged so much as represented in Bonaparte's figure.

2942

Depth $4\frac{3}{5}$; head $3\frac{1}{4}$, width
2. Snout $3\frac{1}{8}$ in head from snout
tip; eye $5\frac{1}{5}$, $1\frac{3}{5}$ in snout, $1\frac{1}{4}$
in interorbital, ^{pre}maxillary reaches
opposite hind eye edge, expansion
 $1\frac{1}{3}$ in eye; length 2 in head from
snout tip; interorbital $4\frac{1}{5}$, low,
deeply concave. Gill rakers 6 + 13,
of which 3 or 4 above and below
rudiments, others lanceolate,
subequal with gill filaments or
 $1\frac{3}{4}$ in head.

Scales 50 in lateral line to
caudal base; 6 above; 6 below,
14 predorsal, 4 rows on cheeks.

Caudal largely covered with fine scales. Scales with 145 fine basal circuli, not extended apically; 40 strong triangular apical points.

D. $\overline{\text{I}}$, 20, first branched ray $1\frac{5}{6}$ in ^{total} head length; adipose fin $6\frac{3}{4}$; A. $\overline{\text{I}}$, 12, $\overline{\text{I}}$, first branched ray 3; least depth of caudal peduncle $4\frac{1}{2}$; caudal $1\frac{1}{2}$, well forked, lobes pointed; pectoral $1\frac{2}{3}$; ventral $1\frac{1}{8}$.

Back dark umber brown, obscurely mottled with darker. Under surfaces of head and body paler brownish, with more

or less soiled appearance. Iris
pale brownish. Fins all brownish,
all with very obscure darker
transverse spots on rays of dorsal,
form more or less as cross bands
on other fins.

Aulopus japonicus Günther

Aulopus japonicus Günther, Rep. Voy.

Challenger, vol. 1, pt. 6, 1880, p. 72. Market

of Yokohama. — Franz, Abhandl. Kön.

Bayer. Akad. Wiss., vol. 4, Suppl. Band

1, 1910, p. 21 (Yokohama and Sagami Bays).

Depth $4\frac{2}{5}$ to $4\frac{3}{4}$; head $2\frac{9}{10}$ to $3\frac{1}{3}$, width $1\frac{7}{8}$ to 2. Snout $3\frac{3}{5}$ to $3\frac{4}{5}$ in head from snout tip; eye ^{in young to subequal in male,} $3\frac{1}{5}$ to $3\frac{3}{4}$, greater than snout, ^{greater than bony.} ~~interorbital~~ ^{pre} maxillary reaches ~~half~~ $\frac{1}{2}$ to $\frac{3}{5}$ in eye; expansion $1\frac{4}{5}$ to 2 in eye, length 2 to $2\frac{1}{5}$ in head from snout tip; interorbital $4\frac{1}{4}$ to 5, low, concave. Gill rakers ^{or 9} $8 + 16$, lanceolate, equal gill filaments or $2\frac{1}{3}$ in eye.

Scales 42 or 43 in lateral line to caudal base; 5 above, 4 below, 10 or 11 predorsal, 3 rows on cheek. Caudal largely covered with fine scales.

Scales with 89 or 90 basal radiating
~~str~~ circuli, not extended apically;
 46 rather strong triangular apical
 points.

D. I, 15, I, second branched ray
^{first branched ray in male long as head}
 $1\frac{3}{5}$ to $1\frac{3}{4}$ in total head length;
 adipose fin 6 to $7\frac{1}{2}$; A. II, 8, I,
 first branched ray $2\frac{2}{5}$ to $3\frac{7}{8}$; caudal
 $1\frac{2}{5}$ to $1\frac{3}{4}$, widely expanded or
 but slightly notched; least depth
 of caudal peduncle $4\frac{1}{5}$ to $4\frac{2}{5}$;
 pectoral $1\frac{2}{5}$ to $1\frac{1}{2}$; ventral 1 to
 $1\frac{1}{3}$.

Brownish above, paler to
 whitish below. Three large dark

2948

saddle like blotches on back,
each saddle made up of variable
or obscure darker borders;
first saddle at front of dorsal,
second at hind part of dorsal
usually some scattered brown spots in pale intervals
and third at adipose fin; Iris
silvery white with some gray tints.
Fins all pale brownish.

Genus Scopelosaurus Bleeker
Scopelosaurus Bleeker, Act. Soc. Sci.
Ind. Néerl.^{and} (Amboina), vol. 8, 1860, p.

12. Type Scopelosaurus hoedti Bleeker,
monotypic.

Body elongate, cylindrical, slender,
depth III of more. Head small.
Snout long, pointed. Eye large, anterior.
Mouth large, bordered above by
premaxillaries, long maxillary above.
Teeth fixed, small, uniserial in
premaxillaries, on palatines and vomer,
several series in mandible, none on
tongue. Opercular bones reduced. Gill
rakers rather long and slender. Gills 4.
Pseudobranchiae present. Branchiostegals
9. Scales cycloid, small, absent from
head. Lateral line straight, with over
60 scales, formed of tubules. Three
ventral series of photophores between
isthmus and anal. Dorsal origin little
nearer caudal base than snout tip,
higher than base length or slightly

higher than body. Adipose fin
slender, oblong, pointed, opposite
last anal rays. Anal subequal
with postocular, longer than high,
emarginate. Caudal forked. Pectoral
median, lateral, pointed. Ventral
much shorter than pectoral, nearer
head than anal.

2954

Family Synodontidae

Body oblong or elongate, little compressed. Head moderate, pointed. Mouth very wide, entire upper margin formed by long slender premaxillaries, closely adherent with slender maxillaries, latter mostly rudimentary or obsolete and never expanded posteriorly. Teeth mostly cardiform in both jaws, on palatines and tongue. Canines rarely present and larger teeth usually depressible. No barbels. Opercle thin, complete. Gill membranes separate, free from isthmus, Gill rakers tubercular, or obsolete. Pseudobranchiae present. Branchiostegals usually numerous. Body covered with cycloid scales,

rarely naked. Lateral line present, axial. Skeleton rather well ossified. Air vessel small or wanting. Intestinal canal short. Eggs inclosed in sacs of ovary and extruded through oviduct. Dorsal fin short, of soft rays only. Adipose fin present, rarely obsolete. Anal moderate or long. Caudal forked. Paired fins present.

Mostly shore fishes, some living at great depths and ^{most are} not valued as food.

2956

Analysis of genera

a. Scales present, more or less adherent.

b. Synodontinae. Premaxillary teeth simple, compressed, not barbed, in 1 or 2 rows; broad band of similar teeth on palate; mouth gape wide; flesh firm.

c. Palatine teeth single band each side of palate.

d. Snout very short, shorter than eye; anal longer than dorsal.

Trachinocephalus.

d.² Snout rather acute, longer than eye.

e. Anal much longer than dorsal; no lateral line.

Xystodus.

e.² Anal much shorter than dorsal; lateral line present.

Synodus.

c.² Palatine teeth in 2 bands each side of palate; snout rather acute; anal

2957

shorter than dorsal. Saurida.

b.² Harpadontinae. Lower teeth of lower jaw barbed; longer teeth more or less depressible; anal moderate; flesh very soft. Harpadon.

b.³ Bathysaurinae. Premaxillary teeth in very broad band, curved, unequal, barbed at end; similar band on palatines; flesh delicate. Bathysaurus.

a.² Bathylacinae. Scales very caducous or absent; teeth in narrow bands; vent postmedian. Bathylaco.

2958

Genus Trachinocephalus Gill

Trachinocephalus Gill, Proc. Acad. Nat. Sci. Philadelphia (Cat. East Coast Fishes), 1861, p. 53. Type Salmo myops Schneider, monotypic.

Goodella Ogilby, Proc. Linn. Soc. New South Wales, vol. 22, 1897, p. 249. Type Goodella hypozona Ogilby, monotypic.

Laurida Swainson, Nat. Hist. Animals, vol. 2, 1839, p. 287. Type Salmo foetens (not Linnaeus) Bloch = Salmo myops Schneider, designated by Swain, Proc. Acad. Nat. Sci. Philadelphia, 1882, p. 279.

Body elongate, compressed, robust.
Head deep, laterally compressed.
Snout very blunt, shorter than eye.
Lower jaw protrudes. Teeth simple,
slender, small, close set. Single
band of teeth on each palatine.
Branchiostegals 16. Scales moderate,
55 to 58. Anal longer than dorsal.
Vent premedian, below tip of
last dorsal ray.

Soc. New South Wales, vol. 22, pt. 2,
June 30, 1897, p. 250. On the outer
beaches [near Sydney, New South Wales].

Depth $5\frac{1}{4}$ to $5\frac{1}{2}$; head $3\frac{2}{5}$ to $5\frac{1}{2}$, width $1\frac{7}{8}$ to 2. Snout $6\frac{1}{2}$ to $6\frac{3}{4}$ in head; eye $6\frac{1}{4}$ to $7\frac{4}{5}$, $1\frac{1}{4}$ in snout, $1\frac{1}{3}$ in interorbital; adipose lids narrow, marginal; premaxillary extends 1 to $2\frac{1}{4}$ eye diameters behind eye, length $1\frac{3}{4}$ to $1\frac{7}{8}$ in head; interorbital 6 to $7\frac{1}{4}$, concave. Gill rakers clusters of minute numerous spinules, much less than gill filaments, which $1\frac{3}{4}$ in eye.

Scales 51 to 54 in lateral line to caudal base and 4 or 5 more on

latter; 3 or 4 above, 6 or 7 below,
 16 or 17 predorsal; 5 rows on
 postocular to hind preopercle ridge,
 2 rows on opercle above. Ventral
 axillary scale $3\frac{1}{2}$ in fin. Scales
 with 3 to 5 basal radiating striae,
 edge scalloped; circuli very fine,
 not extended apically.

D. II, 11, I or II, 12, I, first branched
 ray $1\frac{2}{5}$ to $1\frac{4}{5}$ in head; adipose
 fin $6\frac{7}{8}$ to 7; A. 15, I, last ray
 $3\frac{1}{5}$ to $3\frac{2}{3}$; caudal $1\frac{2}{5}$ to $1\frac{2}{3}$,
 forked; least depth of caudal

peduncle $3\frac{4}{5}$ to 4; pectoral $2\frac{1}{4}$ to $2\frac{2}{5}$; ventral 1 to $1\frac{1}{8}$.

Pale brown above, lighter below. Back and side with slightly waved to somewhat irregular longitudinal deep brown lines, usually following courses of scales and enclosing gray band about equal in width to interspace between succeeding band. Scapula with deep brownish. Nape and top of head irregularly mottled with deep brown lines, streaks and blotches. Iris pale brown. Fins

very pale brownish.

Genus Xystodus OgilbyXystodus Ogilby, Proc. Royal Soc.

Queensland, vol. 23, Nov. 7, 1910, p. 5.

Type Xystodus banfieldi Ogilby, monotypic.

Body depressed, slender, little wider than deep. Head moderate.

Eye rather small, adipose lids vestigial. Teeth in jaws unequal, uniserial, long compressed widely separated sagittate fangs and between each pair 1 or 2 much shorter obtusely pointed ones; palatine teeth similar, acicular, biserial, form long narrow band; 2 strong series on hyoid; multiserial patch anteriorly on tongue. Nostrils well separated, anterior circular and cirrigerous,

posterior oblique slit below level of anterior. Frontal groove smooth in front, profusely pierced by small pores behind, continuous with occipital groove. Scales present.

No lateral line. Dorsal origin midway between snout tip and caudal base.

No adipose fin. Anal longer than dorsal, similar. Pectorals small, rounded. Ventrals with 8 rays.

Vent much nearer ventral than anal.

One species.

Xystodus banfieldi Ogilby

Xystodus banfieldi Ogilby, Proc. Royal
Soc. Queensland, vol. 23, Nov. 7, 1910, p. 6.

Near Dunk Island, Queensland.

Depth $7\frac{1}{5}$; head $3\frac{3}{5}$. Snout
 $4\frac{1}{4}$ in head; eye $6\frac{4}{5}$, $1\frac{3}{5}$ in snout;
mouth cleft $1\frac{3}{5}$; interorbital $1\frac{1}{4}$
in eye, concave.

Scales 51 in lateral series;
13 transversely.

D. 11, nearly high as long, height
 $1\frac{9}{10}$ in head; A. 14, thrice long as
high, $\frac{1}{4}$ longer than dorsal;
middle caudal rays $2\frac{1}{2}$ in upper
lobe; caudal peduncle deep as
wide, without keel; pectoral rays
13, reaches ventral base, length
 $2\frac{1}{4}$ in head; ventral $1\frac{1}{10}$, not
reaching vent.

2979

Lilac, each scale of back with dark median stripe, often forked terminally and form together ⁹ narrow longitudinal pencillings. Purplish lateral band about half scale wide

from upper part of opercle to caudal base, dividing lilac of back from yellowish white of lower half of body; anteriorly, to above pectoral, band black and from lower edge gives off 12 short subcruciform bars to encroach on lighter color below; these bars much larger and darker in front and gradually fade away behind. Head spotted with violet and with transverse dark edged bands between eyes and 3 similar bands directed forward and downward from eye to and upon premaxillary. Base and middle rays of caudal and base of pectoral yellow. Length 142 mm. (Ogilby.)

Queensland.

Genus Synodus Gronow

2980

Synodus Gronow, Mus. Ichth., vol. 2, 1763,
no. 157. Species nonbinomial. (Type Esox synodus
Linnaeus). — Scopoli, Introd. Hist. Nat., 1777, p.

449. Type Esox synodus Linnaeus.

Tirus Rafinesque, Carrat. Mus. Animal. Plant.
Sicilia, 1810, p. 56. Type Tirus marmoratus

Rafinesque, monotypic.

Saurus Cuvier, Règne Animal, vol. 2, 1817, p. 169.

Type Salmo saurus Linnaeus, tautotypic.

Alpismaris Risso, Hist. Nat. Eur. Mém., vol. 3,
1826, p. 458. Type Alpismaris risso Risso,

Body elongate, more or less depressed or compressed. Head depressed. Snout triangular, pointed. Eye moderate, greatly advanced. Jaws subequal. Premaxillaries not protractile, very long, strong, more than half of head. Maxillary closely connected with premaxillary and very small or obsolete. Teeth in jaws in 1 to 2 series, large, compressed, knife like, inner and larger depressible. Palatine teeth similar, smaller, in single broad

2982

band each side of palate. Patch of strong depressible teeth on front of tongue. Gill membranes slightly connected. Gill rakers very minute spinules. Pseudobranchiae well developed. Branchiostegals 12 to 16. Stomach with long blind sac and many pyloric coeca. Supraorbital projected little above eye. Scales cycloid, moderate, adherent. Lateral line axial. Dorsal short, premedian. Anal short. Caudal narrow, forked. Pectoral moderate, inserted high.

Ventral anterior, not far behind
pectoral, large, inner rays longer,
rays 8. Vent postmedian.

The following postlarval likely this
genus not identifiable:

83783 U.S.N.M.

Albatross Station 2725.

Length 30 to 40 mm. 4 examples.

band each side of palate. Patch
of strong depressible teeth on front
of tongue. Scales moderate, cycloid,
adherent. L

2989

Analysis of species

a. Scales larger, 43 to 52; lateral line usually with blunt posterior beels.

b. Anal longer than dorsal, with 15 rays.
sageneus.

b.² Anal about long as dorsal, with 10 to 12 rays.

c.² Front dorsal rays reach to or beyond following rays when depressed; lower jaw ends in fleshy point or knob; no black blotch on shoulder girdle; dorsal and caudal without bars.

d. Pectoral short, reaches slightly beyond ventral base, 2 to 2 1/5 in head; ventral long, only slightly less than head, reach more than 1/2 to anal origin; gill covers with pale lining.

e. Eye 4 1/5 to 4 3/4; dorsal fin uniform.
poeyi.

2985

e.² Eye 4; dorsal fin barred with darker. dominicensis.

d.² Pectoral long, reaches past ventral base to about middle of ventral, $1\frac{2}{5}$ to $1\frac{3}{4}$ in head; ventral short, little less than postorbital, not reaching over $\frac{1}{2}$ to anal origin; gill covers with dark lining. evermanni.

c.² Front dorsal rays not reaching tips of following rays when depressed; lower jaw with obtuse tip; black blotch just back of upper front angle of opercle on shoulder girdle; dorsal and caudal with dark bars; gill covers with dark lining. intermedius.

a.² Scales smaller 58 to 70 in lateral line; lateral line without keel.

f.¹ Anal rays 8 to 10.

g.¹ Mouth cleft extends little beyond eye. simulans.

f.² Mouth cleft well extended beyond eye.

h.¹ Scales 4 ($3\frac{1}{2}$) above lateral line.

i.¹ Dorsal 11; Anal 10; snout slightly longer than wide. kaianus.

f.² Dorsal 13; Anal 8 or 9.

f.¹ Head $3\frac{2}{5}$.

h.¹ Snout wide as long; dorsal and caudal spotted; gill membranes uniform. indicus.

h.² Snout broader than long; dorsal and caudal uniform; upper parts of gill membranes with dark blotches. similis.

f.² Head $3\frac{3}{5}$ to $3\frac{7}{8}$ (3 in young). nicholsi.

2987

h.² Scales 5 (4½) above lateral line.

h.¹ Scales 58 to 61 in lateral line.

m.¹ Indo Pacific species.

n.¹ Eye little wider than interorbital and scarcely more than half long as snout; body markings indefinite, fins uniform.
houlti.

n.² Eye much wider than interorbital and more than half long as snout; body with distinct dark cross bars; fins with brown spots.
japonicus.

m.² Atlantic species. synodus.

l.² Scales 68 in lateral line. lucertinus.

f.² Anal rays 11.

a.¹ Snout not broader than long; more than 10 scales in cross

count from dorsal to ventral;
lower jaw shorter.

p.¹ Four rows of scales between
lateral line and adipose fin;
cheeks with 4 to 7 rows of
scales.

g.¹ Cheek with 6 or 7 rows of
scales; eye $4\frac{1}{2}$ to $7\frac{1}{2}$;
scales 56 to 64.

a.¹ Anal usually 11. foetens.

a.² Anal usually 13. scituliceps.

g.² Cheek with 4 rows of scales;
eye 4; scales 55. acutus.

p.² Six rows of scales between
lateral line and adipose fin;
cheeks with 9 rows of scales.
lucioceph.

a.² Snout very wide, broader
than long; 10 scales in cross
count from dorsal to ventral;

jaws subequal.

S.¹ Dorsal scarcely higher
than long. Isaurus.

S.² Dorsal considerably
higher than long. altipinnis.

Synodus sagoensis WaiteSynodus sagoensis Waite, Records

Australian Mus., vol. 6, pt. 2, Sep. 15,

1905, p. 58, pl. 8, fig. 1. Between Fremantle
and Houtman's Abrolhos, West^{ern} Australia.

Depth $7\frac{2}{3}$; head $3\frac{2}{3}$, Snout $4\frac{7}{8}$
 in head; eye $7\frac{1}{10}$, $1\frac{1}{2}$ in snout;
 1 in interorbital; maxillary extends
 2 eye diameters behind eye, length
 $1\frac{2}{3}$ in head; interorbital low, orbit
 cutting in profile.

Scales 52 in lateral line; 4
 above, 4 below, 7 rows on cheek.

D. II, 10, first branched ray
 $1\frac{7}{8}$ in head; adipose fin?;
 A. 15, third ray 4; caudal
 $1\frac{2}{5}$, deeply forked; least depth
 of caudal peduncle $4\frac{7}{8}$; pectoral

2991

$2\frac{4}{5}$, $1\frac{7}{8}$ in postocular; ventral
 $1\frac{1}{10}$ in head.

Yellow above, silvery beneath.
All scales broadly margined with
yellowish brown, especially on lower
surface. Length 265 mm. (Waite.)

Western Australia.

Synodus poeyi Jordan

Synodus poeyi Jordan, Proc. U. S. Nat. Mus., vol. 9, 1886, p. 526. Havana. —

Jordan and Evermann, Bull. U. S. Nat. Mus., no. 47, pt. 1, 1896, p. 536 (compiled). —

Meek and Hildebrand, Field Mus. Nat.

Hist. Publ. no. 215, Zool. Ser. vol. 15, ^{pt. 1,} Dec. 20, 1923, p. 218 (Fox Bay, Colon, Porto Bello).

Synodus intermedius (not Agassiz) Poey,

Enumeratio Pisc. Cuba, 1875, p. 143

(part). — Meek, Proc. Acad. Nat. Sci.

Philadelphia, 1884, p. 132 (Havana).

Synodus jordani

Depth 6 to $8\frac{2}{5}$; head $3\frac{1}{4}$ to $3\frac{2}{3}$, width $1\frac{9}{10}$ to $2\frac{1}{4}$. Snout $3\frac{2}{3}$ to 4 in head from snout tip; eye $4\frac{1}{5}$ to $4\frac{3}{4}$, 1 to $1\frac{1}{8}$ in snout, greatly exceeds interorbital; premaxillary extends $\frac{1}{2}$ to $\frac{3}{4}$ eye diameters behind eye, length $1\frac{2}{3}$ to $1\frac{4}{5}$ in head from snout tip; interorbital $4\frac{1}{2}$ to 5, concave. Gill rakers as minute numerous spinules; gill filaments $1\frac{1}{2}$ in eye.

Scales 41 or 42 in lateral line to caudal base and 3 more on latter; 4 above, 5 below, 12 or 13 predorsal,

4 rows on postocular to hind preopercle ridge. Scales with 3 basal radiating striae; circuli fine, not extended apically.

D. II, 9, I or II, 10, I, first branched ray $1\frac{1}{3}$ to $1\frac{1}{2}$ in total head length; adipose fin $5\frac{2}{5}$ to $5\frac{1}{2}$; A. I, 8, I, first branched ray $2\frac{3}{4}$ to $2\frac{4}{5}$; caudal $1\frac{2}{5}$ to $1\frac{1}{2}$, deeply forked; least depth of caudal peduncle $3\frac{1}{2}$ to 4; pectoral 2 to $2\frac{1}{8}$; ventral $1\frac{1}{6}$ to $1\frac{1}{5}$.

Back brown, mottled with darker. Four dusky transverse rather narrow

bands on back. Along lateral line
8 dark blotches, below and in each
interspace smaller dark spot, also
dark spot may join or oppose larger
dark blotches of lateral line. No
dark blotch on shoulder girdle.
Iris silvery.
Dorsal and caudal grayish. Paired fins
and anal whitish.

Caribbean Sea.

Synodus dominicensis Fowler, Proc. Acad.
Nat. Sci. Philadelphia, 1911 (1912), p.
564, fig. 2. Santo Domingo; Copeia, no.
24, Nov. 19, 1915, p. 50 (type).

Depth $6\frac{1}{4}$; head $3\frac{2}{3}$, width $2\frac{1}{5}$.

Snout $3\frac{3}{4}$ in head from snout tip;
eye 4, $1\frac{1}{5}$ in snout, greater than
interorbital; premaxillary reaches $\frac{1}{3}$
of eye diameter behind eye, length
 $1\frac{2}{3}$ in head from premaxillary tip;
interorbital $4\frac{3}{4}$, slightly concave.
Gill rakers minutely spinescent,
numerous; gill filaments $\frac{1}{3}$ of eye.

Scales 43 in lateral line to

Austral. Archipelago, vol. 2, 1913, p.
148 (compiled). — Fowler, Mem. Bishop
Mus., vol. 10, 1928, p. 65 (compiled).

Depth $5\frac{4}{5}$; head $3\frac{2}{5}$. Snout $3\frac{1}{3}$ in head; eye $5\frac{1}{5}$, $1\frac{2}{5}$ in snout; maxillary extends $\frac{3}{4}$ eye diameter behind eye, length $1\frac{3}{5}$ in head; interorbital low, slightly concave, narrower than eye; frontal bones without sculpture.

Scales 63 in lateral line; 4 above, 6 below, 17 predorsal, 7 rows on cheek.

D. II, 10, first branched ray $2\frac{2}{5}$ in head; adipose fin 7; A. 10, fourth ray 4; caudal $1\frac{1}{2}$, well

forked; least depth of caudal peduncle $4\frac{1}{2}$; pectoral 2, $1\frac{1}{8}$ in postocular; ventral $1\frac{2}{5}$ in head.

Upper parts greenish, lower silvery. Series of blackish spots alternately larger and smaller along middle of body. Length 140 mm.

(Günther.)

Ki Islands and Hawaiian Group.
Gilbert's material I have not seen.

Synodus indicus (Day)

Saurus indicus Day, Journ. Linn. Soc.

London, vol. 11, Zool., 1873, p. 526. Madras;
Fishes of India, pt. 3, 1877, p. 503,
pl. 117, fig. 4; Fauna British India,
vol. 1, 1889, p. 409.

Depth $6\frac{1}{2}$; head $3\frac{2}{5}$. Snout 4 in
head; eye 5, $1\frac{1}{3}$ in snout; maxillary
extends $1\frac{1}{4}$ eye diameters behind eye,
length $1\frac{2}{5}$ in head; interorbital
low, concave.

Scales 55 to 57 in lateral line;
4 above, 4 below, 17 predorsal, 5
rows on cheek.

D. 13, third simple ray $1\frac{7}{8}$ in
head; adipose fin $1\frac{1}{2}$ in eye;
A. 9, third ray 3; caudal $1\frac{2}{5}$,
well forked; least depth of
caudal peduncle $3\frac{5}{6}$; pectoral
 $2\frac{3}{5}$, $1\frac{2}{5}$ in postocular; ventral

$1\frac{1}{3}$ in head.

Brownish in upper $\frac{2}{3}$, dirty white beneath. Numerous bluish irregular spots or blotches along back and sides, in places almost form horizontal bands. Dorsal and caudal white, with grayish spots, forming irregular horizontal bands. Length 178 mm. (Day.)

India.

Synodus similis McCulloch

Synodus similis McCulloch, Mem. Queensland Mus., vol. 7, pt. 3, Nov. 4, 1921, p. 167, pl. 8, fig. 2. Near the Capricorn Group, Queensland, in 25 to 30 fathoms.

Depth 7; head $3\frac{2}{5}$. Snout $4\frac{1}{3}$ in head; eye $5\frac{7}{8}$, $1\frac{1}{3}$ in snout, greater than interorbital; maxillary reaches $1\frac{1}{3}$ eye diameters beyond eye, length $1\frac{3}{4}$ in head; interorbital low, ^{little} concave.

Scales 58 in lateral line; 4 above, 4 below, 15 predorsal, 5 rows on cheeks.

D. II, 11, I, first branched ray $1\frac{2}{3}$ in head; adipose fin 7; A. 9, I, third ray $3\frac{1}{8}$; caudal $1\frac{1}{2}$; least depth of caudal peduncle $5\frac{1}{5}$; pectoral $2\frac{1}{3}$, $1\frac{1}{2}$ in postocular;

ventral $1\frac{1}{8}$ in head.

Grayish on back, sides and lower surfaces white. Ill defined gray markings form indefinite cross bars and about 8 imperfect rings on lateral line. Gray lines form narrow interrupted rows along each series of scales on upper half. Head with gray spots on opercles and gill membranes ornamented with 2 large black spots on each side above opercle.

Fins without markings. Length 185 mm. from snout tip to end of middle caudal rays. (McCulloch.)
Queensland.

Synodus nicholsi Breder

3024

Synodus nicholsi Breder, Bull.
Bingham Oceanogr. Collection, vol. 1,
art. 1, Oct. 19, 1927, p. 13, fig. 6. Royal
Island, Eleutheria, Bahamas.

Depth 6 to 7; head $3\frac{3}{5}$ to $3\frac{7}{8}$, width
 $1\frac{4}{5}$ to 2. Snout $4\frac{3}{5}$ to $4\frac{2}{3}$ in head; eye
 $4\frac{1}{2}$ to 6, $1\frac{1}{4}$ in snout, equals interorbital
though greatly exceeds bony interorbital;
premaxillary extends $\frac{1}{2}$ to $1\frac{1}{5}$ eye diameters
behind eye, length $1\frac{3}{4}$ to $1\frac{4}{5}$ in head;
interorbital $4\frac{1}{2}$ to $6\frac{1}{5}$, concave. Gill
rakers as numerous minute low spinules;
gill filaments $1\frac{2}{5}$ in eye.

Scales 58 in lateral line to caudal

base and 4 more on latter; 4 above, 6 below, 18 to 21 predorsal, 5 rows on postocular to hind preopercle ridge.

Ventral axillary scale $2\frac{1}{2}$ in fin.

Scales with 3 basal radiating striae, edge scalloped; circuli fine, not extended apically.

D. II, 9, I or II, 10, I, first branched ray $1\frac{2}{5}$ to $1\frac{2}{3}$ in head; adipose fin 5 to 6; A. I, 8, I or I, 9, I, longest front ray 3 to $3\frac{1}{3}$; caudal $1\frac{1}{3}$ to $1\frac{2}{5}$, well forked; least depth of caudal peduncle 4 to $4\frac{1}{6}$; pectoral $2\frac{1}{6}$ to $2\frac{1}{5}$; ventral $1\frac{1}{10}$.

Back pale brown, with transverse darker cross bands and each interval with narrower cross band. Under surfaces of head and body whitish. Iris whitish. Fins all more or less uniformly pale, lower ones whitish.

Bahamas. The specimens listed below seem to be the present species. The figure published by Breder shows a larger head ($2\frac{9}{10}$), lower jaw slightly protruding and little more advanced dorsal origin.

53078 U.S.N.M. Nassau. July 20, 1903.
B.A. Bean. Length 71 mm. As Trachinocephalus
myops.

53079 U.S.N.M. Clarence Harbor. July 15, 1903.
B.A. Bean. Length 130 mm. As Trachinocephalus
myops.

Synodus haulti Mc Culloch

3027

Synodus haulti Mc Culloch, Mem. Queensland Mus., vol. 7, pt. 3, no. 4, 1921, p. 165, pl. 8, fig. 1. near the Capricorn Group, Queensland, in 25 to 30 fathoms.

Depth $6\frac{1}{8}$; head $3\frac{1}{4}$. Snout $4\frac{1}{10}$ in head; eye $8\frac{1}{8}$, 2 in snout; premaxillary extends 2 eye diameters behind eye, length $1\frac{2}{3}$ in head; interorbital very slightly less than eye, concave.

Scales 59 in lateral line; 5 above, 4 below, 16 predorsal, 5 or 6 rows on cheek.

D. II, 10, I, first branched ray $2\frac{1}{4}$ in head; adipose fin 7; A. 9, I, second ray $3\frac{2}{3}$; caudal $1\frac{2}{3}$, forked; least depth of caudal peduncle 6; pectoral $2\frac{2}{3}$.

3028

$2 \frac{1}{10}$ in postorbital; ventral $1 \frac{1}{4}$
in head.

Grayish on back, sides and
below white. Some very ill defined
cross bars on back, most prominent
at base of tail and some darker
markings above lateral line. Head
above with vermiculating ^{gray} lines.
extend to lips near end of snout.
Fins without markings. Length
203 mm. (McCulloch.)

p. 566, fig. 3, Hawaiian Islands.

(Lombok, Banda, Moron, New Guinea).

Depth 6 to 8; head $3\frac{1}{8}$ to $3\frac{2}{3}$,
width $1\frac{3}{5}$ to $2\frac{1}{8}$. Snout 4 to 5 in
head from upper jaw tip; eye $5\frac{1}{5}$
to $8\frac{3}{4}$, $1\frac{1}{4}$ to 2 in snout, $1\frac{1}{3}$ ^{to $1\frac{2}{5}$} in
interorbital; premaxillary reaches
 $1\frac{1}{2}$ to $1\frac{3}{5}$ eye diameters behind
eye, length $1\frac{1}{2}$ to $1\frac{3}{5}$ in head
from snout tip; interorbital $5\frac{7}{8}$
to $8\frac{1}{2}$, concave. Gill rakers numerous,
minute, low spinules; gill filaments
 $1\frac{4}{5}$ to 2 in eye.

Scales 55 to 60 in lateral
line to caudal base and 3 or 4

more on latter; 5 or 6 above,
 6 or 7 below, 19 to 22 predorsal,
 7 to 10 rows on postocular and
 hind portion for nearly half its
 area sometimes naked. Ventral
 axillary scale $3\frac{1}{2}$ in fin. Scales
 with 3 or 4 basal radiating striae,
 edges scalloped; circuli very fine,
 not extended apically.

D. III, 10, I or III, 11, I, first
 branched ray 2 to $2\frac{2}{5}$ in total head
 length; adipose fin $6\frac{1}{2}$ to 7; A.
III, 6, I or III, 7, I, first branched

ray $2\frac{2}{3}$ to $3\frac{1}{4}$; caudal $1\frac{4}{5}$ to 2, forked; least depth of caudal peduncle $6\frac{1}{5}$ to $6\frac{1}{4}$; pectoral $2\frac{1}{3}$ to $2\frac{4}{5}$; ventral $1\frac{1}{6}$ to $1\frac{1}{4}$.

Dusky olive above, below whitish. On back 7 dusky saddle like blotches with alternating paler ones. Head blotched with dusky and 2 dusky bands across jaws below. Iris neutral gray. Dorsal and caudal grayish, finely banded with dusky, other fins whitish.

vol. 2, 1860, p. 304. Cuba.

Synodus spixianus Poey, Synop. Pisc. Cuba,
1868, p. 413 (Cuba); Enumeratio Pisc. Cuba, 1875,
p. 397 (Cuba). — Meek, Proc. Acad. Nat. Sci.
Philadelphia, 1884, p. 134 (Havana; Key West).

Depth $5\frac{4}{5}$ to 9; head $3\frac{2}{5}$ to $4\frac{3}{5}$, width $1\frac{7}{8}$ to 2. Snout $3\frac{1}{4}$ to $3\frac{7}{8}$ in head; eye $4\frac{1}{2}$ to $7\frac{1}{2}$, 2 in snout, $1\frac{1}{2}$ in interorbital; premaxillary reaches $1\frac{3}{5}$ eye diameters behind eye, length $1\frac{1}{4}$ to $1\frac{2}{3}$ in head; interorbital $4\frac{2}{5}$ to 6, concave. Gill rakers as minute numerous spinules; gill filaments equal eye.

Scales 56 to 60 in lateral line to caudal base and 4 to 6 more on latter; 5 or 6 above, 6 or 7 below, 22 to 30 predorsal, 6 or 7 rows on

postocular to preopercle ridge.

Axillary pectoral scale $3\frac{1}{3}$ in fin,
ventral axillary scale 3 in fin.

Scales with 3 basal radiating striae;
circuli fine, not extended apically.

D. II, 8, I to II, 11, I, first branched
ray $1\frac{3}{5}$ to $1\frac{2}{3}$ in head; adipose fin
 $4\frac{1}{2}$ to $6\frac{1}{2}$; A. II, 9, I to II, 11, I, first
branched ray $2\frac{4}{5}$ to $3\frac{1}{6}$; caudal $1\frac{2}{5}$
to $1\frac{1}{2}$, well forked; least depth of
caudal peduncle $4\frac{4}{5}$ to 5; pectoral $1\frac{7}{8}$
to $1\frac{9}{10}$; ventral $1\frac{1}{8}$ to $1\frac{1}{3}$.

Back brown, finely mottled with

paler, under surfaces whitish.
Iris silver white. Fins brownish,
lower ones paler.

Massachusetts to Florida, Gulf
of Mexico, West Indies, Bermuda,
Caribbean Sea, Trinidad, Brazil.

~~*Synodus jenkinsi* Jordan and Bollman~~
Synodus jenkinsi Jordan and Bollman,
Proc. U. S. Nat. Mus., vol. 12, 1889, p. 153.

N. $8^{\circ}6'30''$ W. $78^{\circ}51'$; N. $8^{\circ}51'?$ W. $79^{\circ}31'30''$;
Guaymas. — Jordan and Evermann, Bull.
U. S. Nat. Mus., no. 47, pt. 1, 1896, p. 537
(compiled).

Depth $6\frac{1}{8}$ to $7\frac{3}{4}$; head $3\frac{2}{3}$ to 4,
width $1\frac{3}{4}$ to 2. Snout $3\frac{1}{4}$ to $3\frac{1}{3}$ in
head; eye 6 to $7\frac{2}{3}$, $1\frac{7}{8}$ to $2\frac{1}{5}$ in snout,
 $1\frac{1}{2}$ to $1\frac{7}{8}$ in interorbital; premaxillary
reaches $\frac{3}{4}$ to $1\frac{1}{3}$ eye diameters behind
eye, length $1\frac{3}{5}$ to $1\frac{2}{3}$ in head;
interorbital $4\frac{1}{3}$ to $4\frac{4}{5}$, slightly concave.
Gill rakers as very minute numerous

3068

Depth $6\frac{1}{8}$ to $7\frac{3}{4}$; head $3\frac{2}{3}$ to $4\frac{1}{8}$,
width $1\frac{3}{4}$ to $2\frac{1}{2}$. Snout $3\frac{1}{4}$ to $3\frac{2}{5}$
in head; eye $6\frac{3}{5}$ to $7\frac{2}{3}$, $1\frac{4}{5}$ to $1\frac{7}{8}$ in
snout, $1\frac{1}{2}$ to $1\frac{7}{8}$ in interorbital though
much greater than bony interorbital;
premaxillary extends $\frac{3}{4}$ to $1\frac{1}{3}$ eye
diameters behind eye, length $1\frac{3}{5}$ to
 $1\frac{2}{3}$ in head; interorbital $5\frac{4}{3}$ to 6,
slightly concave. Gill rakers as
numerous minute denticles; gill
filaments $1\frac{1}{2}$ in eye.

Scales ~~with~~ 54 to 59 in lateral
line to caudal base and 3 or 4 more on

latter; 5 above, ^{or 7}6₁ below, 21 to 24
predorsal, ^{or 6}5₁ postocular to hind
preopercle ridge. Pectoral axillary
scale $2\frac{3}{4}$ to $3\frac{1}{2}$ in fin, ventral
axillary scale $3\frac{1}{5}$ to $3\frac{4}{3}$ in fin.
Scales with 3 basal radiating striae,
edge scalloped; circuli very fine,
not extended apically.

D. III, 9, I, first branched ray
 $1\frac{1}{2}$ to $1\frac{4}{5}$ in head; adipose fin 5 to
 ^{$\frac{7}{8}$} 6 ~~$\frac{4}{5}$~~ ; A. I, 10, I, ^{or III, II, I,} second branched
ray $2\frac{7}{8}$ to 3; caudal $1\frac{2}{5}$ ^{to $1\frac{2}{3}$} , well
forked; least depth of caudal peduncle

~~branched ray 3; caudal $1\frac{3}{5}$ to $1\frac{2}{3}$,~~
~~deeply forked;~~ least depth of
caudal peduncle $4\frac{1}{2}$ to $4\frac{4}{5}$; pectoral
 $1\frac{2}{3}$ to $2\frac{1}{8}$; ventral $1\frac{1}{8}$ to $1\frac{2}{5}$.

Back brown, mottled slightly with darker, under surfaces whitish.

Iris pale or silvery to gray. Dorsal, adipose fin and caudal brown, also pectoral terminally, other fins whitish.

Off Pacific coast of Mexico and Central America.

p. 68 (Bermuda).

Depth $6\frac{2}{3}$ to $8\frac{1}{8}$; head 4 to $4\frac{1}{4}$, width $1\frac{7}{8}$ to 2. Snout 4 to 5 in head, eye $5\frac{3}{4}$ to $6\frac{1}{2}$, $1\frac{3}{5}$ in snout, $1\frac{4}{5}$ in interorbital; premaxillary extends 1 to 2 eye diameters behind eye, length $1\frac{2}{5}$ to $1\frac{3}{4}$ in head; interorbital $4\frac{1}{2}$ to 5, concave. Gill rakers small low clusters of spinules, greatly shorter than gill filaments, which $1\frac{1}{3}$ in eye.

Scales 57 to 66 in lateral line to caudal base and 3 to 5 more on latter; 3 or 4 above, 5 or 6 below, 19 to 21 predorsal, 4 or 5 rows on

postocular to hind preopercle ridge.
 Ventral axillary scale 3 to $3\frac{3}{5}$ in
 fin. Scales with 3 basal radiating
 striae, edge scalloped; circuli very
 fine, not extended apically.

D. II, 10, I, first branched ray $1\frac{3}{5}$
 to $1\frac{4}{5}$ in head; adipose fin $4\frac{3}{4}$ to $6\frac{2}{3}$;
 A. II, 8, I to II, 10, I, third ray $2\frac{3}{5}$ to $3\frac{4}{5}$;
 caudal $1\frac{2}{5}$ to $1\frac{3}{5}$, forked; least depth
 of caudal peduncle $4\frac{1}{5}$ to 5; pectoral
 $2\frac{1}{5}$ to $2\frac{2}{7}$; ventral 1 to $1\frac{1}{10}$.

Pale brownish, still paler or
 whitish below. Back down over sides

to lateral line mottled finely
with deeper brown reticulations
and wavy lines formed around or
over inconspicuous narrow pale
longitudinal bands, indistinct,
broken and mostly ill defined, though
one above lateral line most distinct.
Head above all mottled with deep
brownish lines. Iris silvered. Fins
pale plain brownish white.

body and tail, below lateral
line and broad as a scale.

Length 255 mm. (Günther.)

China. Imperfectly described,
perhaps it may belong in Trachinocephalus.

Genus Saurida Valenciennes

Saurida Valenciennes, Hist. Nat. Poiss., vol. 22, 1849, p. 499. Type Salmo tumbil Bloch, designated by Jordan, Snyder and Tanaka, Journ. College Sci. Tokyo, vol. 32, art. 1, 1913, p. 53.

Body elongate, subcylindrical, tail tapering. Head oblong, depressed, rather small. Snout short, pointed. Eye small or moderate, with adipose lids. Mouth cleft very wide, bordered above by very long styliform premaxillary, to which thin long maxillary closely adherent. Teeth in jaws unequal, pointed, depressible, more or less curved, in several irregular rows. Two

similar bands on each palatine,
with inner band shorter and
outer with 1 or 2 rows. Numerous
fine teeth on tongue and gill arches.
Gill membranes free. Pseudobranchiae
well developed. Branchiostegals 13 to 16.
Dorsal short, origin premedian.
Adipose fin small. Anal postmedian,
short. Caudal forked. Pectoral inserted
above middle of height, rather short.
Ventral with inner rays much longer
than outer and inserted before
dorsal.

I have been unable to consult
the account of Saurida filamentosa
'Agilby' as quoted by McCulloch.

New Fish: Queensland Coast, Dec. 20,

 Fishes Indo Austral. Archipelago,
 vol. 2, 1913, p. 142 (part). — Fowler,
 Proc. Acad. Nat. Sci. Philadelphia,
 1929, p. 602 (Hong Kong).

Depth $7\frac{1}{4}$ to $7\frac{2}{5}$; head $3\frac{7}{8}$ to $4\frac{2}{5}$,
 width $1\frac{4}{5}$ to 2. Snout $3\frac{3}{4}$ to $4\frac{1}{3}$ in
 head; eye $5\frac{2}{5}$ to $6\frac{4}{5}$, adipose lids
 expose about half eye, narrow

in young, $1\frac{1}{3}$ to $1\frac{1}{2}$ in snout,
 $1\frac{1}{4}$ to 2 in interorbital; premaxillary
extends $1\frac{1}{4}$ to 2 eye diameters
behind eye, length $1\frac{2}{5}$ to $1\frac{1}{2}$ in
head; dentition exposed, in 4 or 5
rows with innermost largest and
2 rows on palatines; interorbital
 $3\frac{1}{3}$ to 4, broad, depressed concavely.
Gill rakers as very fine, minute,
short, villiform teeth; gill filaments
 $1\frac{1}{3}$ in eye.

Scales 49 to 55 in lateral line
to caudal base and 3 more on latter;

5 above, 5 or 6 below, 16 to 20
 predorsal to occiput, 4 rows on
 postocular. Pectoral and ventral
 axillary scaly flaps each half of
 fin. Scales with 3 basal radiating
 striae, edge scalloped or notched;
 circuli very fine, not extended
 apically where entire and
 exposed edge fringed.

D. I or II, 9, I or I or II, 10, I, second
 simple ray $1\frac{1}{5}$ to $1\frac{2}{5}$ in head;
 adipose fin $4\frac{1}{6}$ to $6\frac{1}{3}$; A. II, 8, I or
II, 9, I, second simple ray $2\frac{1}{3}$ to $2\frac{3}{5}$;

caudal $1\frac{1}{5}$ to $1\frac{1}{4}$, deeply forked
and slender lobes pointed; least
depth of caudal peduncle $3\frac{3}{5}$ to $3\frac{3}{4}$;
pectoral $1\frac{2}{5}$ to $1\frac{2}{3}$; ventral $1\frac{1}{3}$ to $1\frac{1}{2}$.

Back pale olivaceous brown,
below still paler to whitish. Iris
pale straw brown. Dorsal, caudal
and pectoral brownish, ventral
and anal more whitish and
adipose fin paler brown than back.

China, Formosa, Riu Kiu, Japan,
Korea. Apparently distinguished by
narrow adipose lids and large

scales. From Saurida grandisquamis it differs chiefly in the smaller scales 52 to 58, though is allied in pectoral nearly long as head without snout.

Saurida argentea Macleay

Saurida argentea Macleay, Proc. Linn. Soc. New South Wales, vol. 6, pt. 2, Sep. 12, 1881, p. 220. Endeavour River, North Queensland. — Kent, Great Barrier Reef, 1893, p. 298, pl. 46, fig. 3 (Cooktown, Townsville, Bowen, Rockhampton), pp. 312, 370 (reference).

Depth 10 in total length; head 7. Head flat above and tapers to rounded snout, which considerably longer than eye diameter. Short predorsal ridge.

Scales 55 in lateral line; 5 above, 8 below.

D. 12, higher than long, first rays much higher than body; A. 10; caudal forked; pectoral not nearly reaching ventral, placed only very little in front of vertical

scale of lateral line, little shorter than ventral, which $\frac{4}{5}$ of head.

Reddish, median line of back darker. Two broad greenish yellow bands on upper half of side; below third narrow linear yellow band; bands extend forward to snout and maxillary, upper passing through eye and unites with dorsal band behind soft fin, median terminating at caudal base and lower above end of anal; bands separated by narrow shining pink bars. Lower surface pearly white. Dark spot on upper lateral band close behind eye and second at preopercle angle, both connected by lighter band. Larger black blotch on each side of upper half of caudal peduncle; united above by broad brown band. Fins red, basal half of rays

from dorsal.

Bluish above, whitish beneath,
most of scales showing silvery
center. Middle rays of tail
blackish. Length 178 mm.

Depth $5\frac{3}{5}$ to $7\frac{4}{5}$; head $3\frac{2}{3}$ to $4\frac{1}{4}$, width $1\frac{7}{8}$ to 2. Snout $3\frac{7}{8}$ to $4\frac{1}{3}$ in head; eye 4 to 6, $1\frac{1}{3}$ in snout, $1\frac{1}{3}$ to $1\frac{2}{5}$ in interorbital; adipose lids rather narrow; premaxillary extended $1\frac{1}{5}$ to 2 eye diameters behind eye, length $1\frac{2}{5}$ to $1\frac{3}{5}$ in head; interorbital 4 to 6, slightly concave. Gill rakers $30+50$, fine denticles, barely $\frac{1}{3}$ gill filaments, which $\frac{1}{2}$ of eye.

Scales 44 to 51 in lateral line to caudal base and 3 or 4 more on

latter; 4 above, 4 to 6 below,
 17 or 18 predorsal, 5 rows on
 postocular. Axillary pectoral scale
 3 in fin, ventral axillary scale
 3 in fin. Scales with 2 or 3 basal
 radiating striae, edge scalloped;
 circuli fine.

D. II, 8, I or II, 9, I, first branched
 ray $1\frac{1}{5}$ to $1\frac{2}{5}$ in head; adipose fin
 5; A. IV, 6, I to IV, 8, I, first branched
 ray $2\frac{1}{8}$ to $2\frac{1}{4}$; caudal $1\frac{1}{4}$ to $1\frac{1}{3}$,
 forked; least depth of caudal
 peduncle 4 to $4\frac{1}{3}$; pectoral $1\frac{4}{5}$ to $1\frac{7}{8}$,

$1\frac{1}{8}$ in postocular; ventral $1\frac{1}{6}$ to $1\frac{1}{4}$ in head.

Brown, paler to whitish below. Back with 7 dusky brown saddles, interspaces with transverse streaks of paler brown. Along lateral line brownish blotch at each dark saddle and streaks over back. Head above mottled with darker. Four deep brown transverse blotches on mandible. Iris brown. Fins pale brown, each dorsal ray with 7 deep brown spots. Caudal with 3 irregular

broad deep brown transverse bands,
in pale interspaces 3 or 4 narrow
paler lines. Anal whitish. Pectoral
with 4 transverse irregular wavy
brown lines and 3 on ventral only
paler.

vol. 29, 1916, p. 39.

3143

Depth $6\frac{2}{3}$ to $9\frac{1}{4}$; head $3\frac{4}{5}$ to $4\frac{1}{6}$, width 2 to $2\frac{1}{8}$. Snout 4 to 5 in head; eye $3\frac{4}{5}$ to 5, 1 to $1\frac{1}{8}$ in snout, subequal with or little greater than interorbital; premaxillary extends eye diameter behind eye, length $1\frac{2}{5}$ to $2\frac{2}{5}$ in head; interorbital 5 to 6, depressed, slightly concave medially. Gill rakers as narrow band of very numerous, fine, irregular, close set, variable denticles; gill filaments $1\frac{1}{3}$ in head.

Scales 42 to 45 in lateral line to caudal base and 3 or 4 more on

latter; 3 or 4 above, 5 below, 18 to 21? predorsal. Scales with 2 to 4 basal radiating striae, edge scalloped; apical edge fimbriate.

D. II, 9, I or III, 10, I, first branched ray 1 in head; adipose fin $3\frac{1}{2}$ to $3\frac{3}{5}$; A. II or III, 9, I, first branched ray $1\frac{7}{8}$ to $2\frac{1}{3}$; caudal $1\frac{1}{8}$ to $1\frac{1}{4}$, well forked; least depth of caudal peduncle $3\frac{1}{4}$ to $3\frac{1}{3}$; pectoral $1\frac{1}{4}$ to $1\frac{2}{5}$; ventral $1\frac{1}{4}$ to $1\frac{1}{3}$.

Largely pale brown, mottled with darker on back, sides and lower

surface very light brown. Iris gray brown. Dorsal, caudal and pectoral with dusky or grayish, other fins whitish.

East Indies, China, Formosa, Japan, Melanesia, Queensland.

Depth $7\frac{3}{5}$ to $7\frac{7}{8}$; head $4\frac{1}{4}$ to
 $4\frac{2}{3}$, width $1\frac{1}{2}$ to $1\frac{4}{5}$. Snout
 $3\frac{1}{3}$ to $4\frac{2}{5}$ in head; eye, ^{6 to} $6\frac{1}{2}$,
 $1\frac{1}{2}$ to $1\frac{2}{3}$ in snout, $1\frac{4}{5}$ to 2 in
interorbital; adipose lids expose
 $\frac{1}{2}$ of eye, $\frac{3}{5}$ of eye in smaller
example; premaxillary extends
 $1\frac{1}{2}$ eye diameters behind eye,
length $1\frac{1}{2}$ in head; teeth fine,

THE ACADEMY OF NATURAL SCIENCES
OF PHILADELPHIA

JAMES A. G. REHN
SECRETARY

LOGAN SQUARE
PHILADELPHIA, PA.

villiform, in 4 or 5 series in jaws with innermost longer, all exposed; 2 rather broad bands of similar teeth on palatines; interorbital $2\frac{7}{8}$ to $3\frac{1}{4}$, broadly depressed, slightly concave. Gill rakers as minute spinules; gill filaments $1\frac{1}{6}$ in eye.

Scales 59 or 60 in lateral line to caudal base and 4 more on latter; 5 above, 8 below, 23 or 24 predorsal, 4 postocular rows. Pectoral axillary scale $1\frac{3}{4}$ to $1\frac{4}{5}$ in fin, ventral axillary scale $2\frac{1}{4}$. Caudal scaly.

Scales with 3 or 4 basal radiating striae, edge scalloped; circuli very fine, not extended apically.

D. II, 8, I or II, 9, I, first branched ray $1\frac{1}{3}$ in head; adipose fin $4\frac{3}{4}$ to $7\frac{3}{4}$; A. II, 9, I, first branched ray $2\frac{1}{10}$ to $2\frac{1}{2}$; caudal $1\frac{1}{8}$ to $1\frac{1}{2}$, forked, lobes pointed; least depth of caudal peduncle $3\frac{1}{3}$ to $3\frac{2}{5}$; pectoral $1\frac{1}{2}$ to $1\frac{3}{4}$, equals postocular; ventral $1\frac{1}{6}$ to $1\frac{1}{5}$ in head.

Brown above lateral line, scales with paler centers, below paler or

brownish white. Iris grayish, adipose lids pale. Dorsal, caudal and pectoral brown, tipped with dusky. Anal and ventral pale brown.

China, Japan, Korea. The distinctions given by Jordan and Herre for comparison with Saurida tumbil do not seem to hold as my specimens of the latter are marked exactly as in the present species. The adipose eyelids of Saurida es is wide, a character, however, difficult to estimate without direct comparison.

Genus Harpadon Le Sueur

Harpadon Le Sueur, Journ. Acad. Nat. Sci. Philadelphia, vol. 5, 1825, p. 50.

Type Salmo (Harpadon) microps Le Sueur, monotypic.

Harpadon Günther, Cat. Fishes Brit. Mus., vol. 5, 1864, p. 401. Type Salmo (Harpadon) microps Le Sueur.

Triurus Swainson, Nat. Hist. Animals, Fishes, vol. 2, 1839, p. 288. Type Triurus microcephalus Swainson, monotypic.

Sauridichthys Bleeker, Natuurk. Tijdschr. Ned. Ind. ^{Nederl.}, vol. 15, 1856, p. 163. Type Saurus ophiodon Valenciennes.

Body elongate, compressed. Head rather small, robust. Snout very short, rounded. Eye small, greatly advanced. Mouth cleft deep, upper edge formed by thin tapering premaxillary. No maxillaries. Mandible protruded. Teeth cardiform, recurved, unequal, depressible, largest in jaws, more or less barbed. Palatines and tongue with teeth. Gill openings wide, membranes free from isthmus. Branchiostegals 17 to 25. Skeleton rather firm. Air bladder small or

absent. Pyloric appendages 16.
Intestine short. Scales thin, cycloid,
deciduous, none anteriorly on body.
Lateral line axial, complete. Dorsal
short, inserted premedian. Adipose
fin present. Anal postmedian. Caudal
forked or trilobate. Pectoral placed
high, small or long. Ventral
moderate or long.

VENTNOR, N. J.

Mr Henry W. Fowler

Dear Henry

glad to get the data
on the blennies as it is interesting
and Jansson was anxious to know
what they were. They took a 30 lb
thrasher shark in young's fair
net on July 1st and it is the
first specimen ever taken for 30
year in this net. I have quite
a number of small specimens
for you and among them are a
lot of very young bottle fish and
others I do not know. Rec'd
postal from Atkinson, he is
at 275 Windsor Ave, Cape May
for the summer. He said Dr.
Stone was not so good as his
heart is in bad shape.

over

Sincerely yours
R. Dale Benson

Analysis of species

- a. Harpadon. Scales present only on posterior part of body.
- b. Pectoral less than head.
- c. Pectoral $1\frac{1}{3}$ in head. translucens.
- c² Pectoral $2\frac{1}{4}$ to $3\frac{1}{4}$ in head. microchir.
- b² Pectoral equal or greater than head with age. neherens.
- a² Peltaharpadon new subgenus. Body more or less covered with scales, also part of head, though anteriorly most deciduous. squamosus.

Subgenus Harpadon Le Sueur

Harpodon translucens Kent

Harpodon translucens Kent, Proc. Royal

Soc. Queensland, vol. 6, no. 5, 1889, pp. 222,

234, pl. 13, fig. 2. Ord River, Cambridge
Gulf, North Australia.

Depth 7; head $4\frac{1}{4}$ ($4\frac{1}{2}$ description).

Snout $8\frac{3}{4}$ in head from snout tip;

eye 9, $1\frac{1}{8}$ in snout; premaxillary

extends $5\frac{1}{2}$ eye diameters behind

eye, length $5\frac{4}{5}$ in head from

snout tip; teeth slender, recurved,

uneven, minutely unciniate, lower

longest, some at mandibular

symphysis on outer surface project forward.

Scales minute, cycloid, only on hind part of body.

D. I, 15 (14 in description), second ray $1\frac{1}{8}$ in total head length; adipose fin $2\frac{3}{4}$; A. 13 (15 in description), first ray $2\frac{4}{5}$; caudal 1, widely forked (with central hind lobe behind in description); least depth of caudal peduncle $4\frac{1}{4}$; pectoral $1\frac{1}{3}$; ventral $1 + \frac{1}{8}$, rays 9.

Transparent, with minute black

speckling along dorsal surface.
Iris peacock blue. Length 125 mm,
(Kent.)

North Australia.

(entrance Tokyo Bay).

(— Goode and Bean, Oceanic Ichth., 1896,
p. 59 (reference)).

Depth $7\frac{1}{2}$ to $9\frac{3}{4}$; head 5 to $5\frac{1}{3}$,
width $2\frac{7}{8}$ to 3. Snout $5\frac{1}{5}$ to 6 in head
from snout tip; eye 9 to $10\frac{3}{4}$, $1\frac{1}{2}$ to
 $2\frac{1}{2}$ in snout, $2\frac{2}{3}$ to $3\frac{1}{3}$ in interorbital;
premaxillary extends $4\frac{2}{5}$ to 5 eye

diameters behind eye, length $1\frac{2}{5}$ to $1\frac{1}{2}$ in head from snout tip; interorbital 4 to $4\frac{2}{3}$, low, depressed or very slightly convex. Gill rakers $5 + 10$ short clusters of 4 to 6 very small spinules; gill filaments equal eye.

Scales 58 to 60 in lateral line to ends of central caudal rays. Scales small on posterior part of body, extend forward on belly to ventral but not to dorsal above lateral line. Scales with 17 to 25 circuli, complete.

D. II, 11, I or II, 12, I, first branched ray $1\frac{4}{5}$ to $1\frac{1}{2}$ in total head length; adipose fin $2\frac{1}{4}$ to $2\frac{1}{2}$; A. I, 14, I, first branched ray $1\frac{4}{5}$ to $2\frac{1}{5}$; caudal $1\frac{1}{5}$ to $1\frac{1}{4}$, emarginate, lobes rounded; least depth of caudal peduncle $3\frac{3}{4}$ to 5; pectoral $2\frac{1}{4}$ to $3\frac{1}{4}$; ventral $1\frac{1}{4}$ to $1\frac{1}{3}$.

Brown above, paler laterally. Under surface of head and body brownish white. Iris silvery gray. Sides of head pale. Dorsal and caudal dark brown like back. Pectoral pale dusky. Anal and

ventral whitish.

1901, p. 261 (N. $25^{\circ}24'$ E. $57^{\circ}27'$, 230 to
243 fathoms).

Depth $5\frac{3}{4}$; head $3\frac{3}{4}$. Snout $10\frac{2}{3}$
in head from snout tip; eye $9\frac{1}{5}$,
slightly greater than snout, equals
interorbital; premaxillary extends
3 eye diameters behind eye, length
 $1\frac{4}{5}$ in head from snout tip;
interorbital flat.

Scales 44 in lateral line to caudal
base and 5 more out over middle of

caudal; 5 above, 5 below. Scales deciduous, less so on hind half of tail.

D. II, 11, first branched ray $1\frac{3}{4}$ in total head; adipose fin $3\frac{2}{5}$; A. II, 13, first branched ray $1\frac{1}{3}$; caudal $1\frac{1}{6}$, deeply forked, median lobe not extended; least depth of caudal peduncle 4; pectoral $1\frac{3}{4}$; ventral $1\frac{1}{8}$.

Hyaline gray. Inside mouth and gill opening slightly pigmented. Peritoneum black. Paired fins and caudal black, male 190 to 217 mm.,

female 230 to 267 mm. (Alcock,
Bay of Bengal.

Genus Bathysaurus Günther

3173

Bathysaurus Günther, Ann. Mag. Nat. Hist., series 5, vol. 2, 1878, p. 182. Type Bathysaurus

ferox Günther, designated by Jordan,

Genera of Fishes, pt. 3, 1919, p. 395.

Body elongate, subcylindrical. Head depressed. Snout produced, flat above. Eye moderate or small, lateral, little advanced. Mouth cleft rather wide, lower jaw projecting. Premaxillary very long, styliform, tapering, not movable. Teeth in wide bands in jaws, not covered by lips, curved, unequal in size and barbed at ends. Series of similar teeth on each palatine, few on tongue and groups of small ones on

hyoid. Gill openings wide,
membranes separate from each other
and from isthmus. Gill rakers
tubercular. Pseudobranchiae well
developed. Branchiostegals 11 or 12.
Scales small. Lateral line axial,
complete. Dorsal premedian, rays 18.
Adipose fin present or absent. Anal
postmedian, moderate. Caudal
emarginate. Pectoral moderately large.
Ventral inserted close behind pectoral,
rays 8.

Analysis of species

a¹. No adipose fin; branched dorsal rays 16. ferox.

a². Adipose fin present; branched dorsal rays 8 to 10. mollis.

width 2 to $2\frac{2}{5}$. Snout $2\frac{7}{8}$ to 3 in
head from snout tip; eye $5\frac{3}{5}$ to 9,
 $1\frac{3}{4}$ to 3 in snout, 1 to $1\frac{3}{4}$ in interorbital.

premaxillary extends 1 to 2 eye diameters behind eye, length $1\frac{1}{2}$ to $1\frac{3}{5}$ in head from snout tip; interorbital $5\frac{1}{5}$ to $5\frac{1}{3}$, largely level, with deep median depression. Gill rakers as row of numerous fine short denticles, greatly less than gill filaments, which equal eye.

Scales 66 to 68 in lateral line to caudal base and 5 more on latter; 10 above, 9 below, $3\frac{1}{2}$ predorsal forward to occiput. Scales all very caducous, most all fallen. Scales simple, thin, with 14 circuli basally, though only 5 or 6 extended continuously apically.

D. III, 16, I, first branched ray

Bathysaurus obtusirostris Gailland,
Expéd. Sci. Travailleur et Talisman,
Pois., 1888, p. 136, pl. 10, figs. 2, a-g, pl.
16, fig. 3. Off Cape Verde Islands, 3655
meters.

$1\frac{2}{3}$ to $1\frac{3}{4}$ in total head length;
A. III, 9, I or III, 10, I, first branched
ray $2\frac{1}{2}$ to $2\frac{7}{8}$; caudal $1\frac{2}{5}$ to $1\frac{2}{3}$,
little emarginate; least depth of
caudal peduncle 5 to $5\frac{2}{3}$; pectoral
 $1\frac{1}{8}$ to $1\frac{1}{3}$, rays 15; ventral $1\frac{7}{8}$ to 2
in total head length, rays 8.

Brown. Iris grayish. Inside
branchiostegal flap bluish black.
Fins all brownish, paired ones
darker brown basally.

Atlantic and Pacific Oceans.

Albatross Station

Length 220 mm.

Bathysaurus mollis Günther

Bathysaurus mollis Günther, Ann. Mag. Nat. Hist., series 5, vol. 2, 1878, p. 182. Middle of South Pacific; off Yeddo; in 1875 to 2385 fathoms; Rep. Voy. Challenger, vol. 22, 1887, p. 183, pl. 46, figs. B-B' (type). — Fowler, Mem. Bishop Mus., vol. 10, 1928, p. 66 (copied).

— Goode and Bean, Oceanic Ichth., 1895, p. 59 (reference). — Vaillant, Rés. Camp. Sci. Monaco, vol. 52, 1919, p. 130 (N. $39^{\circ}56'$ W. $17^{\circ}58'$, 4360 meters, east of Azores). —

Townsend and Nichols, Bull. Amer. Mus.

Nat. Hist. New York, vol. 52, art. 1, May 16, 1925,

p. 10, pl. 1 fig. 1 (off west coast southern Lower California, Lat. 23° , 1760 fathoms).

Depth $8\frac{1}{4}$ to $8\frac{2}{3}$; head $3\frac{1}{8}$ to 4, width $2\frac{1}{8}$. Snout $3\frac{4}{5}$ to $4\frac{3}{5}$ in head from snout tip; eye $5\frac{4}{5}$ to $6\frac{1}{4}$, $1\frac{1}{4}$ in snout, $1\frac{1}{8}$ to $1\frac{1}{4}$ in interorbital; premaxillary reaches $1\frac{2}{3}$ to $1\frac{4}{5}$ eye diameters behind eye, length $1\frac{2}{5}$ to $1\frac{1}{2}$ in head from snout tip; interorbital $4\frac{3}{4}$, low.

Scales enlarged 40 to 50 in lateral line to caudal base and 2 more on latter; 10 above, 7 below, 8 rows on opercle.

D. III, 12, I, first branched ray $1\frac{1}{6}$

3183

to $1\frac{1}{3}$ in total head, little less than first simple ray; adipose fin $5\frac{2}{3}$ to $5\frac{7}{8}$; A. III, 8, I or II, 10, I, first branched ray $1\frac{4}{5}$ to $1\frac{5}{6}$; caudal 1, in young $1 + \frac{1}{7}$, emarginate; least depth of caudal peduncle $4\frac{2}{3}$ to $5\frac{1}{10}$; pectoral $1\frac{1}{6}$; ventral $1\frac{1}{8}$ to $1\frac{1}{3}$.

Whitish, Inside mouth, gill opening and lower parts of body black. Young with 14 narrow vertical bars, extending whole body depth; shorter bar in interspaces not extending upwards above lateral line. Length 191 to 484 mm. (Günther.)

Pacific Ocean. Günther calls attention to the coloration of the young as pattern extremely rare in deep sea fishes.

Genus Bathylaco Goode and Bean
Bathylaco Goode and Bean, Oceanic
Ichth., 1895, p. 57. Type Bathylaco
nigricans Goode and Bean, monotypic.

Body elongate, subcylindrical.
Head large, conic. Snout short.
Eye large, greatly advanced. Maxillary
very long, expanded. Mouth very
large, oblique, wide, lower jaw
projecting. Teeth small, somewhat
biserial in front above and uniserial
behind; narrow band in mandible.
Palatine teeth also in narrow bands.
Opercular bones thin, weak. Gill
opening very wide, left membranes
overlapping right and not attached
to isthmus. Gill rakers few, short.
Scales apparently absent. Dorsal origin
postmedian, first twice longer than
anal. No adipose fin? Caudal forked.
Pectoral small, low. Ventral
moderate, inserted nearly opposite
dorsal origin, rays 8.

Bathylaco nigricans (Goode and Bean)

Bathylaco nigricans (Goode and Bean,
Oceanic Ichth., 1895, p. 57, pl. 18,

fig. 69. Blake Station XXXIX, off Santa
Cruz, 2393 fathoms. — Jordan and Evermann,
Bull. U. S. Nat. Mus., no. 47, pt. 1, 1896, p.
540 (copied).

Depth $6\frac{3}{5}$; head $3\frac{3}{4}$. Snout $7\frac{1}{4}$
in head from snout tip; eye $4\frac{1}{4}$,
greater than snout; premaxillary
extends $1\frac{2}{3}$ eye diameters behind eye,
expansion $1\frac{3}{4}$ in eye, length $1\frac{2}{5}$ in
head from snout tip; interorbital
 $4\frac{1}{3}$, low.

D. 20, height 2? in total head

length; A. 11, height $3\frac{1}{4}$?; inserted
last third of dorsal base; caudal
forked?; least depth of caudal
peduncle $3\frac{1}{5}$; pectoral 5?; ventral
damaged.

Black. Length 213 mm.

(Goode and Bean.)

Atlantic Ocean.
